Guidelines for Use of Generative AI in Term Papers
Philosophy Department, University of Bayreuth

- Submitting a paper that is completely or in part written by GenAI is considered plagiarism and therefore explicitly forbidden.

- Using GenAI as a search engine might result in fake references and/or too many references and/or worsen the citation biases already present in certain general search engines. Students should instead look for references using tools like PhilPapers, the SEP, Google Scholar, or scholarly diversity tools (e.g. WIP or the Diversity Reading List).

- Students can be requested by the lecturer to submit a statement of authenticity of their work, possibly also documenting how GenAI has been used in the preparation of the document.

- Teachers may reserve the right to use AI-detection software (turnitiin, copyleaks, …)

- Final discretion is up to the lecturer.
